

February 19, 2009

To our Valued Suppliers:

Since September 9, 2003, TTM Technologies has achieved ISO 14001 certification. An integral part of our Environmental Management System (EMS) is our environmental policy, that you can view at: http://www.ttmtech.com/manufacturing/man_env.jsp, is summarized as follows:

1. CONTINUOUS IMPROVEMENT

TTM intends to continuously improve its environmental performance, and will monitor metrics such as those surveyed by the printed circuit board industry association to measure such improvement.

2. POLLUTION PREVENTION

TTM intends to prevent pollution by utilizing low toxicity raw materials; minimizing raw material and energy usage; and supporting recycled product markets whenever economically viable.

3. REGULATORY COMPLIANCE

TTM facilities shall operate in compliance with all applicable federal, state and local environmental regulations. Customer and electronic industry requirements covering chemical use, air emissions, waste water discharges and waste management at all times.

Everyone's commitment to this fundamental policy and TTM environmental procedures will insure that TTM activities protect both human health and the environment in the communities where we operate.

As a valued supplier, you play an important role in our EMS efforts. Each TTM division has adopted objectives and targets that address significant environmental aspects. These projects generally involve reducing chemical waste, water usage and energy. With a focus on continuous improvement and pollution prevention, TTM strongly encourages all of our suppliers to join us in achieving these goals, and to implement and maintain your own Environmental Management System to further lessen impacts to the environment. This upstream and holistic approach to environmental management will help TTM and our suppliers mitigate negative impacts for future generations.

TTM appreciates the support of its suppliers as we both have faced product challenges in meeting the EU RoHS and REACH directives. Your continued cooperation on reducing or eliminating hazardous substances in our products will be needed as additional restrictions and regulations are adopted in both the EU and other jurisdictions worldwide.

If you have questions, please contact Lee Wilmot, Director EHS, at 860-870-2639.

Sincerely,

Kent Alder
President & CEO
